(095) 869-1650

Portfolio: <https://aiayee.github.io/INRITA-PORTFOLIO/>

Professional Summary

Data Engineer with nearly 2 years of hands-on experience building and operating batch data pipelines in retail. Develops PySpark and Airflow pipelines on Huawei Cloud, monitoring 25+ production DAGs and delivering curated POS data from 62 stores to Retail, Data Science, and business teams. Skilled in Python, SQL, data integration, data quality validation, and production deployment, with hands-on experience in platform upgrades and cloud migration.

Education

King Mongkut's University of Technology Thonburi
Bachelor of Science in Information Technology

August 2022 - June 2026
Second Class Honours | GPAX 3.28

Skills

- **Data Engineering:** Apache Airflow, Apache Spark (PySpark), Airbyte, ETL/ELT, Data Ingestion, Data Integration
- **Programming & Query:** Python, SQL
- **Databases:** PostgreSQL, Microsoft SQL Server, MySQL, MongoDB
- **Data Quality & Privacy:** Source-to-Target Validation, NULL & Duplicate Checks, Data Type Validation, PII Encryption/Hashing, Pipeline Monitoring
- **API Integration:** REST API, Python Requests, Data Mapping
- **Cloud & DevOps:** Huawei Cloud (ECS, CCE, OBS), Docker, Jenkins, GitLab CI/CD
- **Data Visualization:** Power BI, Power Query, Apache Superset
- **AI & Productivity:** GitHub Copilot, ChatGPT, Claude
- **Professional Skills:** Cross-functional Collaboration, Technical Communication, Problem-solving, Ownership

Work Experience

Data Engineer (Outsourced)
Siam Piwat Co., Ltd.

July 2025 - Present
Bangkok, Thailand

- Built an end-to-end POS sales pipeline, ingesting data from 106 MSSQL tables into DWS via stored procedures and transforming 10,000+ daily transactions across 62 stores with PySpark into curated datasets for daily Retail reporting.
- Led data ingestion projects for E-Coupon and Event Registration systems, building Airbyte pipelines and collaborating with Application teams to understand data flows and requirements. Provided data context and validated data quality to support Data Science teams in using the ingested data for downstream analysis.
- Developed daily and weekly Airflow DAGs and monitored 25+ production DAGs, resolving ~2 incidents/month to maintain reliable data delivery within SLA.
- Implemented SQL-based data quality checks, including source-to-target record counts, NULL/duplicate checks, data type validation, and column-level/API-to-database comparisons.
- Supported PII protection by applying AES-256 encryption and SHA-256 hashing to sensitive customer fields before loading into the warehouse.
- Validated 10+ pipelines for the DWS 9.0 to 9.1.0 upgrade in QA before production deployment, ensuring downstream reporting continuity.
- Migrated 7 pipelines from ECS-based environments to CCE, reducing pipeline execution time from 2 hours to 10 minutes (~92% reduction) through pipeline implementation and validation in QA before production cutover.
- Managed version-controlled pipeline deployments from QA to production using GitLab CI/CD and Jenkins.
- Developed operational reports and dashboards using Apache Superset as an alternative to Power BI, contributing to approximately THB 2M in avoided Power BI licensing costs, while delivering processed data through CSV exports to SharePoint.

Data Engineer (Internship)
Siam Piwat Co., Ltd.

January 2025 - June 2025
Bangkok, Thailand

- Ingested 24 tables from MySQL into DWS for downstream reporting and analytics.
- Built 2 Apache Superset dashboards using SQL-based aggregations to help Tourism and Marketing teams monitor LINE OA registrations, tourist registrations, and campaign performance.
- Wrote technical documentation and took part in Agile/Scrum sprints.

Project Experience

JobSpark — Online Job Search Platform for University Students
Database Designer & QA Tester | Capstone Project

- Designed a normalized MySQL schema of 15 tables with relationships and constraints based on application requirements.
 - Defined 56 product backlog items (PBIs) and 197 unit and integration test cases to validate system functionality and data consistency.
 - Worked with developers to troubleshoot database issues throughout the development lifecycle.
- Technologies:** MySQL, Go (Fiber), Flutter, Next.js
